Introducing the Xpandojacket
The Ingenious Expandable
Bottom Gusset Bubble Mailer

E Xpandable Mailer

Sometimes the average bubble mailer just isn't good enough to hold bulkier products, and your only other resort is to use a more expensive, corrugated box with void fill. The Xpandojacket is an expandable bottom gusset bubble mailer with a bright white, water resistant triple layered polyethylene exterior. This innovative mailer by PAC Worldwide expands to fit items that need more room such as toys, shoes, handbags, and electronic components. <http://www.pac.com/Xpandojacket.html>

Closure System

Pressure sensitive (self-seal) adhesive closure is reliable and tamper-evident.

Anti-stat release liner peels off quickly. Easy to load contents and seal package when the packing process needs to be fast and efficient.

Opening System

PACzip tear strip provides quick and easy opening. Saves time in product retrieval, does not compromise the security of the contents in transit or the integrity of the mailer like a traditional perforation.

Material

Multi-layer (co-extruded) polyethylene exterior film laminated to an interior bubble material. Durable, moisture resistant with exceptional puncture resistance and tear strength. Clean white, aesthetic appearance. Lightweight and small cubic dimensions. Effective protection for your bulkier products. Enhances your corporate image and customer perception of your product(s).

Construction

Side pouch heat seal and 2" bottom gusset construction offers superior bursting strength. Your contents will remain secure from the point of origin to its destination.
