

PAC Worldwide is a proud member of the communities in which we operate and the world we share.

To make a difference we believe it has to start on a local level.

PAC Plant Standards

Recycling:

- PAC products can be returned to any PAC location to be recycled.
- Ensure that all plant scrap that can be recycled is, for either internal re-use or sold to recyclers.
- Utilize an appropriate amount of post consumer recycled resin in our production process when practical.
- Document and certify the accuracy of any reported use of Post Consumer Material (PCR) used in the manufacturing process.

Air:

- Perform all printing in compliance with EPA regulations with minimal emissions of volatile organic compounds (VOCs).

Waterways:

- Take preventative steps to eliminate unprocessed waste and industrial liquids from entering storm drains.

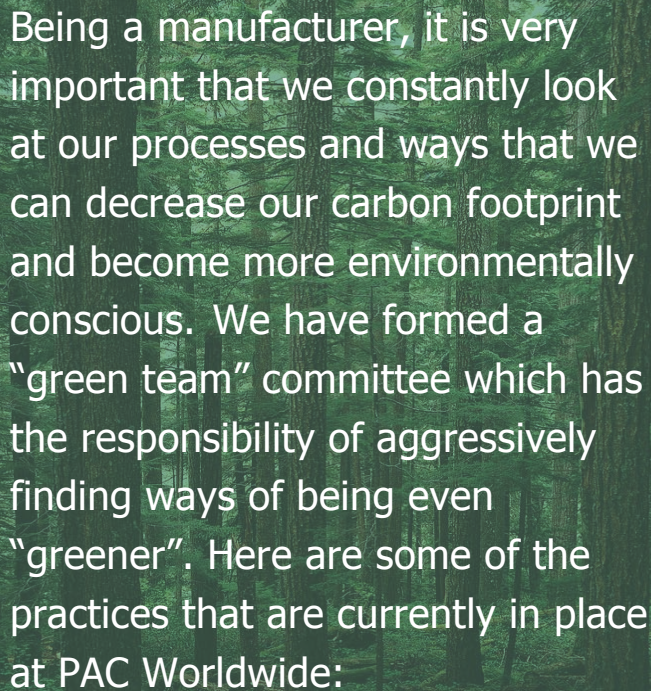

Landfills:

- Certify all colorants, inks, and processing aids comply with heavy metals standards pursuant to California AB455.

Community:

- On a local level we have office recycling programs in place. We also contribute to ongoing food, clothing and back-to-school drives.

Striving for a
Sustainable Future

Being a manufacturer, it is very important that we constantly look at our processes and ways that we can decrease our carbon footprint and become more environmentally conscious. We have formed a “green team” committee which has the responsibility of aggressively finding ways of being even “greener”. Here are some of the practices that are currently in place at PAC Worldwide:

Paperboard Manufacturing:

- We use 100% recycled paper – 95% of which is post-consumer recycled.
- 95% of board scrap is recycled.
- 90% of plastic scrap is recycled.
- 100% of adhesives waste are confined and sent to a recycling plant.
- 100% of toxic and hazard residues (oil, solvents, and impregnated solids) are confined and sent to a certified vendor.
- We use 70% water based adhesives.

Plastics Manufacturing:

- Inclusion of up to 15% PCR in some polyethylene products.
- Inclusion of recycled paper and OCC in some paper products.
- We recycle internally generated polyethylene scrap.
- U.S. printing utilizes 100% water based inks.
- We recycle used inks through an environmentally friendly process.
- Pallets utilized are 100% reusable and recyclable.

- Scrap corrugate is baled and processed through a recycler.
- Lubricants are recycled.
- We utilize low energy lighting.
- Corrugated, cradles and cores are all recycled.
- All corrugated used is made of 35% recycled materials.
- Waste oils, solvents are 100% recycled.
- Timers are used on all equipment for reducing energy.
- Less than 1 ppm of lead in all of our products.

Striving for a
Sustainable Future
