

# PACjacket Packaging System

## Product Description

**PACjacket** is an automated packaging system that can be as basic or as complex as you need it to be. Unlike any other system you may have seen before, the PACjacket System utilizes our patent-pending "cool" heat-seal technology, which encases your product in the same bubble film that is used by fulfillment companies worldwide. This ground-breaking technology will dramatically increase your productivity, while substantially lowering your material, labor and shipping costs.

# PACjacket Packaging System

[www.pac.com](http://www.pac.com)

## How does it work?

In its' most basic operation, an operator will load the items that need to be packaged, then apply a label and the PACjacket System will produce your package. Drop onto the outfeed conveyor and off it goes. It doesn't get more simple than that.

## Our Modular Menu

If your needs are more complex, no problem. You simply select the PACjacket System modules from our Modular Menu, and we can outfit your system with an automatic in-feed conveyor, scan/print/apply label application systems, or even motion scales if needed.

## What if I need something special?

You tell us what your needs are; we build the system to accommodate those needs. And by the way, we'll take care of all the complicated software issues as well. Our IT group will work with your IT group to ensure batch counts, collates, project runs, customer and product information are all processed seamlessly and within seconds to get your package made, and on its' way.

## What can I run through the machine?

A better question might be "what can't you run through the machine?" With its' 9" infeed capacity, the PACjacket System can accommodate most any pick and pack fulfillment application. Soft goods, boxes, shoes, jewelry, nutraceuticals, you get the picture. And multi-packs? You bet. Whatever you can stuff between the infeed guides, you will be able to make a PACjacket with ease.

## Cold Seal?... no thank you!

The revolutionary PACjacket System does not use expensive Cold Seal or Cold Fusion material of any kind. That technology has been around for well over a decade. Instead, the PACjacket uses an innovative, patent-pending process called, "cool" heat-seal. Make no mistake! This is not the messy, high temperature, heat-seal from years ago. This PACjacket process requires no venting, there are no fumes, and if you could get to it, the heating element is so "cool" that you could place your hand right on it and not get burned. Yet another advantage of the PACjacket over Cold Seal is that your customer can use the same bag to return their items if needed.

## If it's good enough for them, isn't it good enough for you?

The PACjacket System uses the same bubble/film material that is used in the millions of units by many in the overnight courier industry with no damage issues.

## Portability

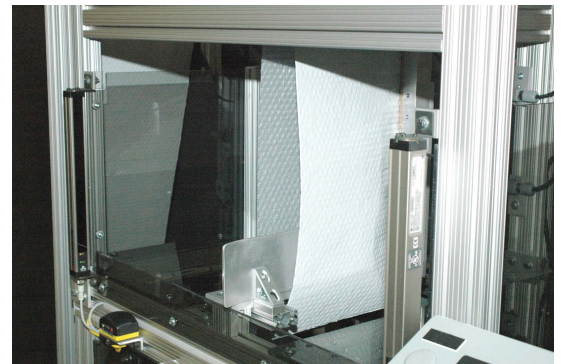

With the PACjacket System being mounted on casters, you can quickly bring ease of automation right up to your packing line. All you need is 80psi and 115v, and you are ready to go! No need to completely reconfigure your packing line to add the productivity and convenience of automation.

Material	Width	Linear Ft.	Diameter
PACjacket Plus (bubble film)	12" - 42"	variable	variable

## Specifications

Electrical: 115V, 15 AMP

Air: 80 PSI
