PAC makes NEW features to the
PACjacket System available!

D

Decrease cost of labor!

Decreasing the cost of labor should be on every company's "increase revenue plan". Take a second and figure out how much you spend on fulfillment.

Consider the time it takes one person to...

1. Hand load the product and paperwork into a bubble mailer
2. Pull the release liner and seal the package
3. Print and place address labels
4. Weigh and apply postage

A person hand-loading and sealing kraft bubble mailers puts out an average of 3 bags per minute.*

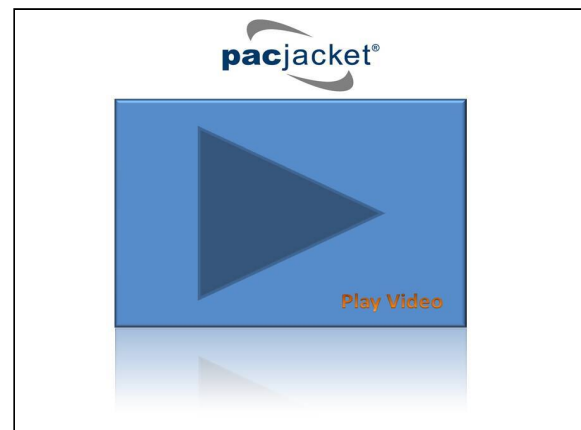

Now imagine if you had a machine that did all of the loading, packing, labeling, scanning and weighing for you at up to 900 PLUS packages an hour*, don't you think that would save you money?

*Output varies

The following add-ons are available now to save you even more money on labor and increase your fulfillment speed:

- Auto infeed
- Auto scan
- Variable bag length sensors
- Auto label
- Motion scales
- Multi zone sortation
