

Poly Bubble Mailers

Airjacket® mailers are unique, lightweight, protective bubble mailers made from a durable, moisture resistant, multi-layer blend of co-extruded polyethylene film. The exterior film is laminated to a resilient interior bubble material for effective cushioning protection and is constructed with a bottom fold and strong side heat seals for superior bursting strength. The bright white exterior film creates the professional image you are looking for and our pressure sensitive self-seal adhesive closure system is reliable, tamper-evident and easy to use. Airjacket mailers are ideal for shipping cosmetics, books, jewelry and pharmaceuticals. Optional dual peel and seal flaps provide e-commerce companies with the perfect solution for customer returns.

PACzip is available on the Airjacket. This allows the mailer to be opened more easily by the recipient without compromising the integrity of the mailer, or the security of the contents in transit.

Stock or Custom Solutions

Plain white Airjacket mailers are available in eleven industry standard sizes through our convenient Stock Products Program.

Be Different... Brand your Deliveries! Increase your brand awareness by customizing your package with our six color printing capabilities, which enable us to print even the most complex designs.

Poly Bubble Mailers

Closure System

The pressure sensitive (self-seal) adhesive closure is reliable and tamper-evident. The **Anti-stat** release liner peels off quickly, making it easy to load contents and seal package when the packing process needs to be fast and efficient.

Opening System

Unlike a traditional perforation, the **PACzip** tear strip opens quickly and easily and does not compromise the security and integrity of the mailer or its contents.

Material

Multi-layer (co-extruded) polyethylene exterior film is laminated to an interior bubble material, creating a durable, moisture resistant product with exceptional puncture resistance and tear strength. The lightweight and clean aesthetic enhances your corporate image and customer perception of your product(s). This solution is ideal for protection of documents and other products that benefit from right-sized packaging.

Construction

The side pouch heat seals and bottom fold construction provides superior bursting strength, so your contents will remain secure from the point of origin to the destination.

The Airjacket is 100% recyclable.

Cross Section View

7/64" bubble height.

Stock Products Program
