

Which is REALLY the more environmentally and cost efficient packaging option?

Corrugated Box

Poly Bubble Mailer

VS

RECYCLABLE

Municipal curbside bins will accept corrugated boxes

It's important to know
corrugated boxes and
poly mailers made from
LDPE and HDPE
are
BOTH
100% recyclable

over 20,000 grocery stores participate in the store-drop off program where you can recycle your poly mailers

It requires **91% less energy** to recycle a pound of plastic than a pound paper

PROTECTIVE

Product that is damaged during transit needs to be replaced, requiring 2 more shipments- (one for returning the item and one to replace the item) the returned item is often discarded resulting in more waste.

This causes a much larger impact on the environment than the packaging itself.

Poly mailers are **water resistant**

EFFICIENT

Poly mailers increase fulfillment speed and decrease labor costs

REDUCES IMPACT

Downgauging your packaging

Reduces Impact on Costs

Right sized, lighter weight packaging decreases DIM weight costs

Less packaging means it costs less

Reduces Environmental Impact

Less packaging means less environmental impact

Right sized packaging takes up less space in the truck which decreases emissions used to ship your product.

The production of corrugated boxes leaves a significantly larger environmental footprint than the production of poly mailers

REDUCES FOOTPRINT

14" x 20"x 3" Corrugated Box 10,000 Corrugate Boxes (.7 lb each)	14.25" x 19.25" Poly Bubble Mailer 10,000 Polyethylene Mailers (.1 lb each)
Wood Used: 20.1 tons (121 Trees)	Fossil Fuel Used: 149 kg (1 barrel oil)
Total Energy: 131 Million BTUs	Total Energy: 7 Million BTUs
Greenhouse Gas: 84,600 lbs CO2	Greenhouse Gas: 800 lbs CO2
Water Usage: 87,700 gallons	Water Usage: 580 gallons
Solid Waste: 2,050 lbs	Solid Waste: 154 lbs

Corrugated Boxes use

19 times more energy

106 times more CO2

152 times more water

13 times more solid waste

Than Poly Bubble Mailers

REDUCE

REUSE

RECYCLE

RETHINK

Ecommerce companies can reduce carbon emissions by giving up the corrugated box in favor of lightweight, less wasteful, poly mailers.

Recycling labels and instructions can be printed on these mailers to educate the public on the importance of properly recycling or reusing plastics, so they don't end up in our oceans.
